Thick film high precision chip resistors Size 1206, 0805, 0603, 0402

\*Contents in this sheet are subject to change without prior notice.

#### FEATURE

- 1. Small size and light weight
- 2. High reliability and stability
- 3. Reduced size of final equipment
- 4. High precision
- 5. Higher component and equipment reliability
- 6. RoHS compliant & Lead free products.

#### **APPLICATION**

- Power supply
- PDA
- Digital meter
- Computer
- Palmtop computers

### DESCRIPTION

The resistors are constructed in a high grade ceramic body (aluminum oxide). Internal metal electrodes are added at each end and connected by a resistive paste that is applied to the top surface of the substrate. The composition of the paste is adjusted to give the approximate resistance required and the value is trimmed to nominated value within tolerance which controlled by laser trimming of this resistive layer.

The resistive layer is covered with a protective coat. Finally, the two external end terminations are added. For ease of soldering the outer layer of these end terminations is a Tin (lead free) alloy.

# QUICK REFERENCE DATA

| Item                                       | General Specification       |             |             |             |
|--|-----------------------------|-------------|-------------|-------------|
| Series No.                                 | WF12H                       | WF08H       | WF06H       | WF04H       |
| Size code                                  | 1206 (3216)                 | 0805 (2125) | 0603 (1608) | 0402 (1005) |
| Resistance Range                           | 10Ω ~ 1MΩ ( E96+E24 series) |             |             |             |
| Resistance Tolerance                       | ±0.5%, ±0.1%                |             |             |             |
| TCR (ppm/°C) $10\Omega \le R \le 1M\Omega$ | ≤ ± 100 ppm/°C              |             |             |             |
| Max. dissipation at T <sub>amb</sub> =70°C | 1/4 W 1/8 W 1/10 W 1/16W    |             |             |             |
| Max. Operation Voltage (DC or RMS)         | ) 200V 150V 50V             |             | 50V         |             |
| Max. overload voltage (DC or RMS)          | 400V 300V 100V 100V         |             |             | 100V        |
| Climatic category                          | 55/155/56                   |             |             |             |

Note :

- 1. This is the maximum voltage that may be continuously supplied to the resistor element, see "IEC publication 60115-8"
- 2. Max. Operation Voltage : So called RCWV (Rated Continuous Working Voltage) is determined by

 $RCWV = \sqrt{RatedPower \times ResistanceValue}$  or Max. RCWV listed above, whichever is lower.

3. Non E96 series resistance upon requested.

#### **DIMENSIONS(unit : mm)**

| Part No | WF12H         | WF08H         | WF06H         | WF04H     |
|---------|---------------|---------------|---------------|-----------|
| L       | $3.10\pm0.1$  | $2.0\pm0.10$  | $1.60\pm0.10$ | 1.00±0.05 |
| w       | $1.60\pm0.1$  | $1.25\pm0.10$ | $0.80\pm0.10$ | 0.50±0.05 |
| Tt      | $0.50\pm0.2$  | $0.40\pm0.20$ | $0.30\pm0.10$ | 0.20±0.10 |
| Tb      | $0.45\pm0.2$  | $0.40\pm0.20$ | $0.30\pm0.20$ | 0.25±0.10 |
| т       | $0.65\pm0.15$ | $0.5\pm0.15$  | $0.45\pm0.15$ | 0.35±0.05 |

#### MARKING

#### • 3-digits marking for 0603 size

WFxxH has same marking rule as WRxx ±1%.

#### • 4-digits marking for 1206, 0805 size

Each resistor is marked with a four digits code on the protective coating to designate the nominal resistance value. For values below  $97\Omega6$  the R is used as a digit. For values of  $100\Omega$  or greater, the first 3 digits are significant, the fourth digit indicates the number of multiple to follow.

#### Example

| RESISTANCE       | 10Ω  | 12Ω  | 100Ω | 6800Ω | 47000Ω |
|------------------|------|------|------|-------|--------|
| 4-digits marking | 10R0 | 12R0 | 1000 | 6801  | 4702   |

• No marking code for 0402 size

### FUNCTIONAL DESCRIPTION

#### **Product characterization**

Standard values of nominal resistance are taken from the E96 & E24 series for resistors with a tolerance of  $\pm 0.5\%$ ,  $\pm 0.1\%$ . The values of the E24/E96 series are in accordance with "IEC publication 60063".

#### Derating

The power that the resistor can dissipate depends on the operating temperature; see Fig.2

Figure 2. Maximum dissipation in percentage of rated power

As a function of the ambient temperature

# SOLDERING CONDITION

The robust construction of chip resistors allows them to be completely immersed in a solder bath of 260°C for 10 seconds. Therefore, it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse (mixed PCBs).

Surface Mount Resistors are tested for solderability at 235°C during 2 seconds. The test condition for no leaching is 260°C for 30 seconds. Typical examples of soldering processes that provide reliable joints without any damage are given in Fig 3.

Fig 3. Infrared soldering profile for Chip Resistors

#### **CATALOGUE NUMBERS**

The resistors have a catalogue number starting with :

| WF06        | н                                     | 3742                          | D         | т                    | L                       |
|-------------|---------------------------------------|-------------------------------|-----------|----------------------|-------------------------|
| Size code   | Type code                             | Resistance code               | Tolerance | Packaging code       | Termination code        |
