$\pm 5 \%, \pm 1 \%, \pm 0.5 \%, \pm 0.1 \% 1 \Omega \sim 10 \mathrm{M} \Omega$
Thick Film High Power Chip Resistors

Size 2512 2W， 2010 1W， 1210 1／2W， 1206 1／2W， 0805 1／4W， 0603 1／8W， 0402 1／8W

## FEATURE

1. High power rating and compact size
2. High reliability and stability
3. Reduced size of final equipment
4. RoHS compliant and Lead free products
5. Flame Retardant

## APPLICATION

- Power supply
- PDA
- Digital meter
- Computer
- Automotives
- Battery charger
- DC-DC power converter

## DESCRIPTION

The resistors are constructed in a high grade ceramic body (aluminum oxide). Internal metal electrodes are added at each end and connected by a resistive paste that is applied to the top surface of the substrate. The composition of the paste is adjusted to give the approximate resistance required and the value is trimmed to nominated value within tolerance which controlled by laser trimming of this resistive layer.
The resistive layer is covered with a protective coat. Finally, the two external end terminations are added. For ease of soldering the outer layer of these end terminations is a Tin (lead free) alloy.

Fig 1. Construction of Chip-R

## QUICK REFERENCE DATA

## Recommended Solder Pad Dimensions

| Type | W | D | L |
| :---: | :---: | :---: | :---: |
| WF25P | 3.7 mm | 2.45 mm | 7.6 mm |

## MARKING

For 0603 above size，each resistor is marked with a four－digit for $1 \%$ tolerance and three－digit for $5 \%$ tolerance on the protective coating to designate the nominal resistance value．
For 0603，each resistor is marked with a three－digit！
For 0402，no marking ！
For Jumper，2512／2010 defines 0000，1206／0805／0603 defines 000
Example：
$102=1 \mathrm{k} \Omega$

## 102

## 16R0

## FUNCTIONAL DESCRIPTION

## Product characterization

Standard values of nominal resistance are taken from the E96 \＆E24 series for resistors with a tolerance of $\pm 5 \%$ \＆$\pm 1 \%$ ．The values of the E24／E96 series are in accordance with＂IEC publication 60063＂．

## Derating curve

The power that the resistor can dissipate depends on the operating temperature；see Fig． 2

Figure 2 Maximum dissipation in percentage of rated power as a function of the ambient temperature

## MOUNTING

Due to their rectangular shapes and small tolerances，Surface Mountable Resistors are suitable for handling by automatic placement systems．
Chip placement can be on ceramic substrates and printed－circuit boards（PCBs）．
Electrical connection to the circuit is by individual soldering condition．
The end terminations guarantee a reliable contact．

## SOLDERING CONDITION

The robust construction of chip resistors allows them to be completely immersed in a solder bath of $260^{\circ} \mathrm{C}$ for 10 seconds．Therefore，it is possible to mount Surface Mount Resistors on one side of a PCB and other discrete components on the reverse（mixed PCBs）．
Surface Mount Resistors are tested for solderability at $235^{\circ} \mathrm{C}$ during 2 seconds．The test condition for no leaching is $260^{\circ} \mathrm{C}$ for 30 seconds． Typical examples of soldering processes that provide reliable joints without any damage are given in Fig 3.

Fig 3．Infrared soldering profile for Chip Resistors

## CATALOGUE NUMBERS

The resistors have a catalogue number starting with ．

|  | －25 | P | 102 | J | T | L |
