

WS72321
Low-Power Rail-to-Rail Input Output Operational Amplifiers
[Http://www.willsemi.com](http://www.willsemi.com)
Descriptions

The WS72321 series is a single low-voltage operational amplifier with rail-to-rail input/output swing. Ultra low quiescent current makes this amplifier ideal for portable, battery operated equipment. The common mode input range includes ground making the device useful for low-side current-shunt measurements. The ultra small packages allow for placement on the PCB in close proximity to the signal source thereby reducing noise pickup.

The WS72321 is available with MSL 3 Level in SOT353(SC70-5L) package and SOT23-5L package. Standard products are Pb-Free and halogen-Free.

2. A heat sink may be required to keep the junction temperature below the absolute maximum rating when the output is shorted indefinitely.
3. Thermal resistance varies with the amount of PC board metal connected to the package. The specified values are for short traces connected to the leads.
4. Full power bandwidth is calculated from the slew rate $FPBW = SR/(\pi \cdot V_{P-P})$.
