General Description

The SN74HC/HCT14 is a hex inverter with Schmitt-trigger inputs. This device features reduced input threshold levels to allow interfacing to TTL logic levels. Inputs include clamp diodes. This enables the use of current limiting resistors to interface inputs to voltages in excess of V_{CC}. Schmitt trigger inputs transform slowly changing input signals into sharply defined jitter-free output signals.

Features

- Input levels:

  For SN74HC14: CMOS level

  For SN74HCT14: TTL level

- Low-power dissipation

- Specified from -40℃ to +125℃

- Packaging information: DIP14/SOP14/TSSOP14
