

XL317 SOP8

1 Features

- Adjustable Output Down to 1.2 V
- 100-mA Output Current
- Capable of Handling up to 40V V_{IN}
- Line Regulation Typically 0.01% /V
- Load Regulation Typically 0.1% /A
- No Output Capacitor Required (†)
- Current Limit Constant With Temperature
- Eliminates the Need to Stock Many Voltages
- Standard 3-Lead Transistor Package
- 80-dB Ripple Rejection
- Available in 3-Pin TO-92, 8-Pin SOIC, or 6-pin DSBGA Packages
- Output is Short-Circuit Protected
- See AN-1112 (SNVA009) for DSBGA Considerations

2 Applications

- Automotive LED Lighting
- Battery Chargers
- Post Regulation for Switching Supplies
- Constant-Current Regulators
- Microprocessor Supplies

3 Description

The XL317 is an adjustable positive voltage regulator capable of supplying 100 mA over a 1.2-V to 37-V output range. The XL317 is easy to use and requires only two external resistors to set the output voltage. Both line and load regulation are better than standard fixed regulators. The XL317 is available packaged in a standard, easy-to-use TO-92 transistor package.

The XL317 offers full overload protection. Included on the chip are current limit, thermal overload protection, and safe area protection. Normally, no capacitors are required unless the device is situated more than 6 inches from the input filter capacitors, in which case an input bypass is required.

The XL317 uses *floating* topology and sees only the input-to-output differential voltage, therefore supplies of several hundred volts can be regulated, provided the maximum input-to-output differential is not exceeded. The device makes a simple adjustable switching regulator, a programmable output regulator, or by connecting a fixed resistor between the adjustment and output, the XL317 can be used as a precision current regulator.

The XL317 is available in a standard 3-pin TO-92 transistor package, the 8-pin SOIC package, and 6-pin DSBGA package. The XL317 is rated for operation over a -40°C to 125°C range.

6 Specifications

6.1 Absolute Maximum Rating ⁽¹⁾⁽²⁾

	MIN	MAX	UNIT
Power dissipation	Internally Limited		
Input-output voltage differential		40	V
Operating junction temperature	-40	125	°C
Lead temperature (soldering, 4 seconds)		260	°C
Storage temperature, T_{stg}	-55	150	°C

- (1) Stresses beyond those listed under *Absolute Maximum Ratings* may cause permanent damage to the device. These are stress ratings only, which do not imply functional operation of the device at these or any other conditions beyond those indicated under *Recommended Operating Conditions*. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

Long-term stability	$T_J = 125^\circ\text{C}$, 1000 Hours		0.3%	1%	

- (1) Unless otherwise noted, these specifications apply: $-25^\circ\text{C} \leq T_J \leq 125^\circ\text{C}$ for the XL317; $V_{IN} - V_{OUT} = 5\text{ V}$ and $I_{OUT} = 40\text{ mA}$. Although power dissipation is internally limited, these specifications are applicable for power dissipations up to 625 mW. I_{MAX} is 100 mA.
- (2) Regulation is measured at constant junction temperature, using pulse testing with a low duty cycle. Changes in output voltage due to heating effects are covered under the specification for thermal regulation.
- (3) Thermal resistance of the TO-92 package is 180°C/W junction to ambient with 0.4-inch leads from a PCB and 160°C/W junction to ambient with 0.125-inch lead length to PCB.

8 Application and Implementation

8.1 Application Information

The XL317 is a versatile, high-performance, linear regulator with 1% output-voltage accuracy. An output capacitor can be added to further improve transient response, and the ADJ pin can be bypassed to achieve very high ripple-rejection ratios. Its functionality can be used in many different applications that require high performance regulation, such as battery chargers, constant-current regulators, and microprocessor supplies.

8.2 Typical Applications

8.2.1 1.25-V to 25-V Adjustable Regulator

Full output current not available at high input-output voltages

†Optional—improves transient response

*Needed if device is more than 6 inches from filter capacitors

$$\dagger\dagger V_{OUT} = 1.25V \left(1 + \frac{R_2}{R_1} \right) + I_{ADJ}(R_2)$$

Figure 16. 1.25-V to 25-V Adjustable Regulator

8.2.1.1 Design Requirements

The device component count is very minimal, employing two resistors as part of a voltage-divider circuit and an output capacitor for load regulation. An input capacitor is needed if the device is more than 6 inches from filter capacitors. An optional bypass capacitor across R2 can also be used to improve PSRR.

8.2.1.2 Detailed Design Procedure

The output voltage is set based on the selection of the two resistors, R1 and R2, as shown in Figure 16. For details on capacitor selection, see *External Capacitors*.
