# 1. **DESCRIPTION**

The 3232 series devices device consists of two line drivers, two line receivers, and a dual chargepump circuit with 15-kV ESD protection pin to pin (serial-port connection pins, including GND). The device meets the requirements of TIA/EIA-232-F and provides the electrical interface between an asynchronous communication controller and the serial-port connector. The charge pump and four small external capacitors allow operation from a single 3-V to 5.5-V supply. The devices operate at data signaling rates up to 250 kbit/s and a maximum of 30-V/µs driver output slew rate.

# 2. FEATURES

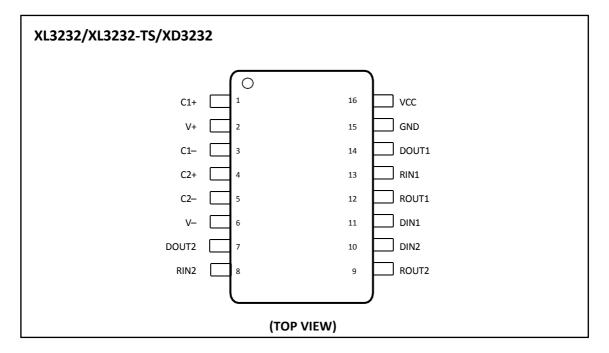

- RS-232 Bus-Pin ESD Protection
  - ±15 kV Using Human-Body Model (HBM)
  - ±8kV (IEC6 1000-4-2, Contact Discharge)
  - ±15kV (IEC6 1000-4-2, Air Gap Discharge)
- Meets or Exceeds the Requirements of TIA/EIA-232-F and ITU v.28 Standards
- Operates With 3-V to 5.5-V VCC Supply
- Operates Up To 250 kbit/s
- Two Drivers and Two Receivers
- Low Supply Current:  $300 \mu A$  (Typical)
- External Capacitors : 4 × 0.1 μF
- Accepts 5-V Logic Input With 3.3-V Supply

# 3. Applications

- Industrial PC
- Wired Networks
- Data Centre and Enterprise Networking
- Battery-Powered Systems
- PDAs
- Laptops
- Portable Computers
- Pocket PC
- Handheld Devices

# 4. PIN CONFIGURATIONS AND FUNCTIONS

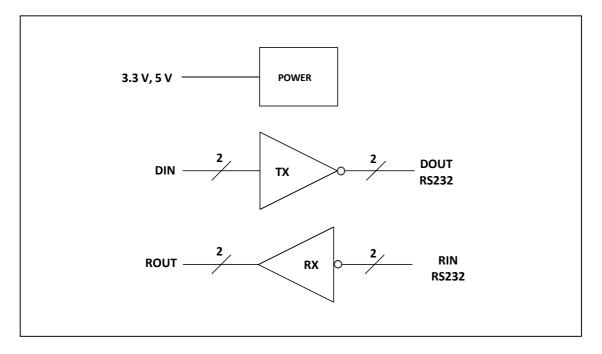

#### **Pin Functions**

PIN			
NAME NO.		I/O	DESCRIPTION
C1+	1	_	Positive lead of C1 capacitor
V+	2	0	Positive charge pump output for storage capacitor only
C1 -	3	_	Negative lead of C1 capacitor
C2+	4	—	Positive lead of C2 capacitor
C2 -	5	_	Negative lead of C2 capacitor
V -	6	0	Negative charge pump output for storage capacitor only
DOUT2	7	0	RS232 line data output (to remote RS232 system)
RIN2	8	I	RS232 line data input (from remote RS232 system)
ROUT2	9	0	Logic data output (to UART)
DIN2	10	I	Logic data input (from UART)
DIN1	11	I	Logic data output (from UART)
ROUT1	12	0	Logic data input (to UART)
RIN1	13	I	RS232 line data output (from remote RS232 system)
DOUT1	14	0	RS232 line data input (to remote RS232 system)
GND	15	—	Ground
VCC	16		Supply Voltage, Connect to external 3-V to 5.5-V power supply

# 6. SPECIFICATIONS

#### 6.1. Absolute Maximum Ratings

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
VCC	Supply voltage <sup>(2)</sup>		- 0.3	6	V
V+	Positive output supply voltage <sup>(2)</sup>		- 0.3	7	v
V -	Negative output supply voltage <sup>(2)</sup>		- 7	0.3	v
V+ - V -	Supply voltage difference <sup>(2)</sup>			13	v
		Drivers	- 0.3	6	v
VI	Input voltage	Receivers	- 25	25	v
		Drivers	-13.2	13.2	V
Vo	Output voltage	Receivers	- 0.3	V <sub>CC</sub> + 0.3	v
Tj	Operating virtual junction temperature	•		125	°C
T <sub>stg</sub>	Storage temperature		-45	150	°C

 Operation outside the Absolute Maximum Ratings may cause permanent device damage. Absolute Maximum Ratings do not imply functional operation of the device at these or any other conditions beyond those listed under Recommended Operating Conditions. If used outside the Recommended Operating Conditions but within the Absolute Maximum Ratings, the device may not be fully functional, and this may affect device reliability, functionality, performance, and shorten the device lifetime

[2] All voltages are with respect to network GND.

# **6.2. Thermal Resistance Characteristics**

# 8. Detailed Description

#### 8.1. Overview

The 3232 series devices consists of two line drivers, two-line receivers, and a dual charge-pump circuit with IEC61000-4-2 ESD protection terminal to terminal (serial-port connection terminals, including GND). The device meets the requirements of TIA/EIA-232-F and provides the electrical interface between an asynchronous communication controller and the serial-port connector. The charge pump and four small external capacitors allow operation from a single 3-V to 5.5-V supply. The device operates at data signaling rates up to 250 kbit/s and a maximum of 30-V/ $\!\mu s$  driver output slew rate. Outputs are protected against shorts to ground.

# 8.2. Feature Description

#### 8.2.1. Power

The power block increases, inverts, and regulates voltage at V+ and V- pins using a charge pump that requires four external capacitors.

#### 8.2.2. RS232 Driver

Two drivers interface standard logic level to RS232 levels. Both DIN inputs must be valid high or low.

#### 8.2.3. RS232 Receiver

Two receivers interface RS232 levels to standard logic levels. An open input will result in a high output on ROUT. Each RIN input includes an internal standard RS232 load.

#### 8.3. Device Functional Modes

Table 8-1 and Talbe 8-2 list the functional modes of the drivers and receivers of 3232.

INPUT DIN	OUTPUT DOUT					
L	н					
Н	L					

#### Table 8-1. Each Driver<sup>(1)</sup>

[1] H = high level, L = low level

Table 8-2. Each Receiver <sup>(1)</sup>							
INPUT RIN OUTPUT ROUT							
L	Н						
Н	L						
Open	Н						

[1] H = high level, L = low level,

Open = input disconnected or connected driver off

#### 8.3.1. VCC Powered by 3 V to 5.5 V

The device is in normal operation.

# 8.3.2. VCC Unpowered, VCC = 0 V

When 3232 is unpowered, it can be safely connected to an active remote RS232 device.

# 9. Application and Implementation

# 9.1. Application Information

For proper operation, add capacitors as shown in Figure 9-1.

# 9.2. Typical Application

ROUT and DIN connect to UART or general-purpose logic lines. RIN and DOUT lines connect to a RS232 connector or cable.

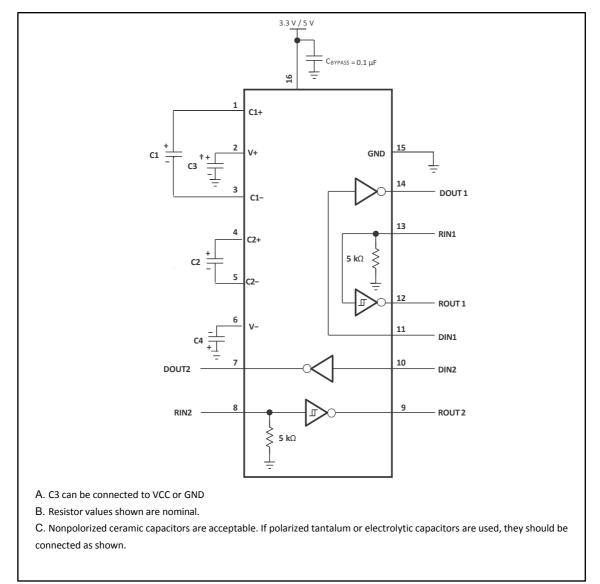

Figure 9-1. Typical Operating Circuit and Capacitor Values

# 9.2.1. Design Requirements

The recommended VCC is 3.3 V or 5 V. 3 V to 5.5 V is also possible The maximum recommended bit rate is 250 kbit/s.

#### 9.2.2. Detailed Design Procedure

All DIN inputs must be connected to valid low or high logic levels. Select capacitor values based on VCC level for best performance.

# 9.2.3. Application Curve

Figure 9-2 curves are for 3.3-V VCC and 250-kbit/s alternative bit data stream.

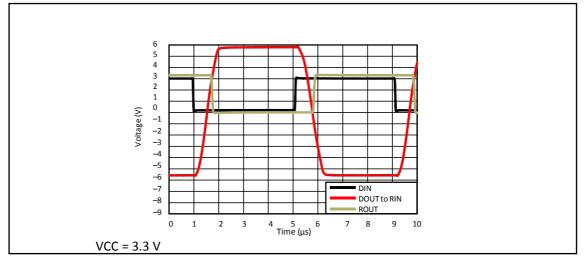

Figure 9-2. 250 kbit/s Driver to Receiver Loopback Timing Waveform

# **10.** Power Supply Recommendations

The supply voltage, VCC, should be between 3 V and 5.5 V. Select the values of the charge-pump capacitors using Table 9-1.

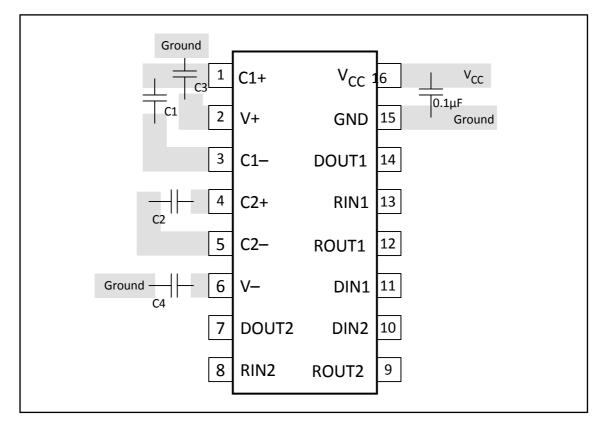

# 11. Layout

# 11.1. Layout Guidelines

Keep the external capacitor traces short, specifically on the C1 and C2 nodes that have the fastest rise and fall times.
