

## FEATURES

- **±20 mV ( $\pm 0.8\%$ ) max. Initial Tolerance (A Grade)**
- **Operating Current of 20  $\mu$ A to 20 mA**
- **0.6 $\Omega$  Dynamic Impedance (A Grade)**
- **Low Temperature Coefficient**
- **Low Voltage Reference—2.5V**
- **1.2V Device and Adjustable Device Also Available— 285-2.5 Series and 285 Series, respectively**

## DESCRIPTION

The 285-2.5/385-2.5 are micropower 2-terminal band-gap voltage regulator diodes.

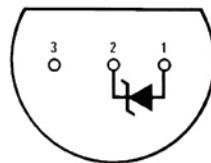

Operating over a 20  $\mu$ A to 20 mA current range, they feature exceptionally low dynamic impedance and good temperature stability. On-chip trimming is used to provide tight voltage tolerance. Since the 285-2.5 band-gap reference uses only transistors and resistors, low noise and good long term stability result.

Careful design of the 285-2.5 has made the device exceptionally tolerant of capacitive loading, making it easy to use in almost any reference application. The wide dynamic operating range allows its use with widely varying supplies with excellent regulation.

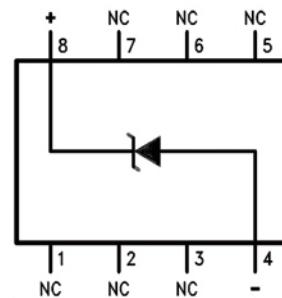

The extremely low power drain of the 285-2.5 makes it useful for micropower circuitry. This voltage reference can be used to make portable meters, regulators or general purpose analog circuitry with battery life approaching shelf life. Further, the wide operating current allows it to replace older references with a tighter tolerance part. For applications requiring 1.2V see 285-2.5.

The 285-2.5 is rated for operation over a -55°C to 125°C temperature range while the 285-2.5 is rated -40°C to 85°C and the 285-2.5 0°C to 70°C. The 285-2.5/385-2.5 are available in a hermetic TO package and the 285-2.5/385-2.5 are also available in a low-cost TO-92 molded package, as well as SOIC and SOT-23. The 285-2.5 is also available in a hermetic leadless chip carrier package.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

- (1) Refer to RETS185H-2.5 for military specifications.
- (2) Absolute Maximum Ratings indicate limits beyond which damage to the device may occur. Operating Ratings indicate conditions for which the device is intended to be functional, but do not ensure specific performance limits. For ensured specifications and test conditions, see the Electrical Characteristics. The ensured specifications apply only for the test conditions listed.
- (3) If Military/Aerospace specified devices are required, please contact the TI Sales Office/Distributors for availability and specifications.
- (4) For elevated temperature operation,  $T_J \text{ MAX}$  is:

XL185-N : 150°C

XL285-N : 125°C

XL385-N : 100°C

See [THERMAL CHARACTERISTICS](#).

- (5) The human body model is a 100 pF capacitor discharged through a 1.5 kΩ resistor into each pin.
