1 μ A, 300mA Low Dropout Voltage Linear Regulator

General Description

The XTP2021 is a ultra-low-power, low-step-down linear regulator that supports a wide voltage input of 1.8V to 5.5V and a standby current of 1 μ A, making these devices ideal for battery-powered systems that spend most of their time in standby mode, requiring minimal standby power consumption to extend the life of the device. Integrated enable control mode that reduces current to only 100nA(typical) when the low level enable signal is turned off.

XTP2021 only needs 1 μ F ceramic capacitor to work normally. The XTP2021 integrated short-circuit current limiting and thermal shutdown protection. And has automatic discharge function, can be disabled in the state of rapid discharge V_{OUT} .

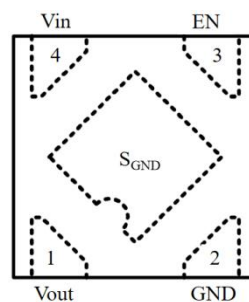

The operating temperature range is -40 $^{\circ}$ C~ +85 $^{\circ}$ C.
