CONSTRUCTION

The resistor is constructed on top of a high-grade ceramic body. Internal metal electrodes are added on each end to make the contacts to the thick film resistive element. The composition of the resistive element is a noble metal imbedded into a glass and covered by a second glass to prevent environment influences. The resistor is laser trimmed to the rated resistance value. The resistor is covered with a protective epoxy coat, finally the two external terminations (Gold) are added. See fig. 6.

FUNCTIONAL DESCRIPTION

OPERATING TEMPERATURE RANGE

AR0402 to AR1206: -55 °C to +155 °C

POWER RATING

Each type rated power at 70°C:

AR0402=1/16 W; AR0603=1/10 W; AR0805=1/8 W; AR1206=1/4 W.

RATED VOLTAGE

The DC or AC (rms) continuous working voltage corresponding to the rated power is determined by the following formula:

 $V = \sqrt{P \times R}$

or max. working voltage whichever is less

Where

V = Continuous rated DC or AC (rms) working voltage (V)

P = Rated power (W)

 $R = Resistance value (\Omega)$
