## ORDERING EXAMPLE

The ordering code for a RC0402 0.0625 W chip resistor value $100 \mathrm{~K} \Omega$ with $\pm 5 \%$ tolerance, supplied in 7 -inch tape reel of 10,000 units per reel is: RC0402JR-07I00KL.

## NOTE

I. All our RSMD products meet RoHS compliant and Halogen Free. "LFP" of the internal 2D reel label mentions "Lead Free Process".
2. On customized label, "LFP" or specific symbol can be printed.

## CONSTRUSTION

The resistor is constructed on top of a high-grade ceramic body. Internal metal electrodes are added on each end to make the contacts to the thick film resistive element. The composition of the resistive element is a noble metal imbedded into a glass and covered by a second glass to prevent environmental influences. The resistor is laser trimmed to the rated resistance value. The resistor is covered with a protective epoxy coat, finally the two external terminations (matte tin on Ni-barrier) are added, as shown in Fig. 9
