- ※ All test data is based on 25 °C ambient.
- ※ DC current(A) that will cause an approximate ΔT40°C.
- ※ DC current(A) that will cause L0 to drop approximately 30% Typ.
- ※ The part temperature (ambient + temp rise) should not exceed 125°C under worst case operating conditions.
Circuit design,component.PWB trace size and thickness,airflow and other cooling provision all affect the part temperature.Part temperature should be verified in the den application.
