## Description

The $2842 / 43 / 44 / 45$ are fixed frequency current mode PWM controller．They are specially designed for OFF－Line and DC to DC converter applications with a minimal external components．Internally implemented circuits include a trimmed oscillator for preci－ se duty cycle control，a temperature compensated reference，high gain error amplifier，current sensing comparator，and a high current totempole output ideally suited for driving a power MOSFET．Protection circuitry includes built undervoltage lockout and current limiting．The 2842 and 2844 have UVLO thresholds of 16 V （on）and 10 V （off）．The corresponding thresholds for the $2843 / 45$ are 8.4 V （on）and 7.6 V （off）．The 2842 and 2843 can operate within $100 \%$ duty cycle．
The 2844 and 2845 can operate within $50 \%$ duty cycle．
The 284X has Start－Up Current 0．5mA（typ）．

## Features

－Low Start－Up and Operating Current
－High Current Totem Pole Output
－Undervoltage Lockout With Hysteresis
－Operating Frequency Up To 500 KHz

## Pin Connection

| Zener Voltage | $\mathrm{V}_{\mathrm{z}}$ | $\mathrm{I}_{\mathrm{CC}}=25 \mathrm{~mA}$ | 30 | 38 |  | V |

＊－Adjust $\mathrm{V}_{\mathrm{cc}}$ above the start threshold before setting it to 15 V
Note 1：Parameter measured at trip point of latch with $\mathrm{V}_{\text {pin2 }}=0$ ．
Note 2：Gain defined as $A=\Delta \mathrm{V}_{\text {pin } 1} / \Delta \mathrm{V}_{\text {pin } 3} ; 0 \leq \mathrm{V}_{\text {pin3 }} \leq 0.8 \mathrm{~V}$ ．
Note 3：These parameters，although guaranteed，are not $100 \%$ tested in production．

Pin functions

| $\mathbf{N}$ | Function |  |
| :--- | :--- | :--- |
| 1 | COMP | This pin is the Error Amplifier output and is made for loop compensation． |
| 2 | $\mathrm{~V}_{\text {FB }}$ | This is the inverting input of the Error Amplifier．It is normally connected to the switching power supply <br> output through a resistor divider． |
| 3 | $\mathrm{I}_{\text {SENSE }}$ | A voltage proportional to inductor current is connected to this input．The PWM uses this information to <br> terminate the output switch conduction． |
| 4 | $\mathrm{R}_{T} / \mathrm{C}_{T}$ | The oscillator frequency and maximum Output duty cycle are programmed by connecting resistor $\mathrm{R}_{\mathrm{T}}$ to $\mathrm{V}_{\text {ref }}$ <br> and capacitor $\mathrm{C}_{T}$ to ground． |
| 5 | GROUND | This pin is the combined control circuitry and power ground． |
| 6 | OUTPUT | This output directly drives the gate of a power MOSFET．Peak currents up to 1A are sourced and sink by <br> this pin． |
| 7 | $\mathrm{~V}_{C C}$ | This pin is the positive supply of the integrated circuit． |
| 8 | $\mathrm{~V}_{\text {ref }}$ | This is the reference output．It provides charging current for capacitor $\mathrm{C}_{T}$ through resistor $\mathrm{R}_{T}$. |
